The ~~present invention provides a~~ A tablet packing  
apparatus in which there is no risk that next tablets are  
5 will be mixed into tablets previously discharged. The  
packing apparatus ~~comprises~~ includes a plurality of feeder  
vessels (36) containing the tablets, a plurality of mounting  
bases (32) on which respective feeder vessels (36) are  
mounted, and a tablet reserving member (200) disposed  
10 below the mounting base (32) and reserving the tablets  
fed from the feeder vessels (36) and a shutter (203,300)  
which is movable to open and close the lower opening of  
the tablet reserving member (200). The apparatus further  
comprises a LED (201) which is turned on when the tablets  
15 are fed to the tablet reserving member (200) and a sensor  
(206, 301a, 301b) for detecting opening or closing  
operation of the shutter (203), whereby when the sensor  
(206, 301a, 301b) detects the opening operation of the  
shutter (203,300), the LED (201) is turned off.
